Baran Erdogan – Cloud Platforms (AWS) Assignment #1

1- AWS Innovation Sandbox – Request

After a few problems, I was able to access to my AWS Innovation Sandbox account. I requesteed a new lease and it was granted instantly.

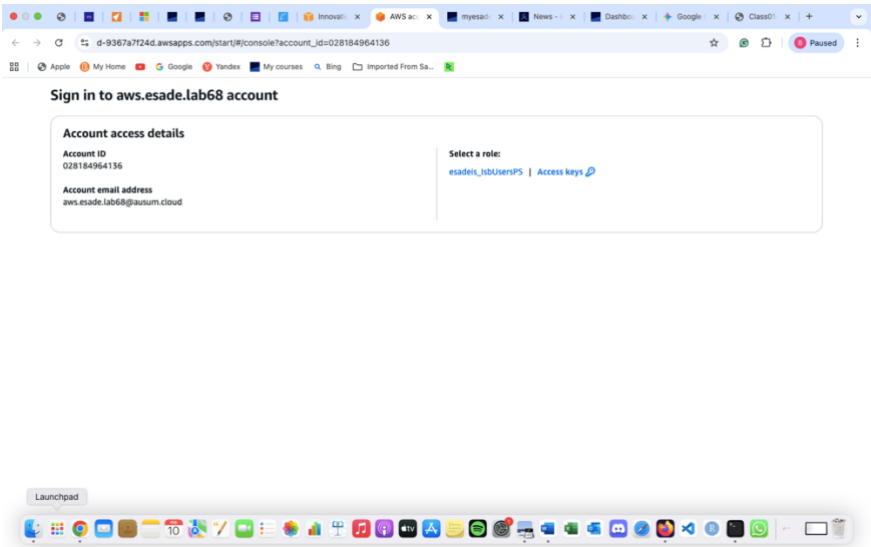

Figure 1: AWS Innovation Sandbox Account

2- Access AWS Console from Sandbox

After the sandbox step, I logged in to my AWS console. Budget, role, and region were all correct.

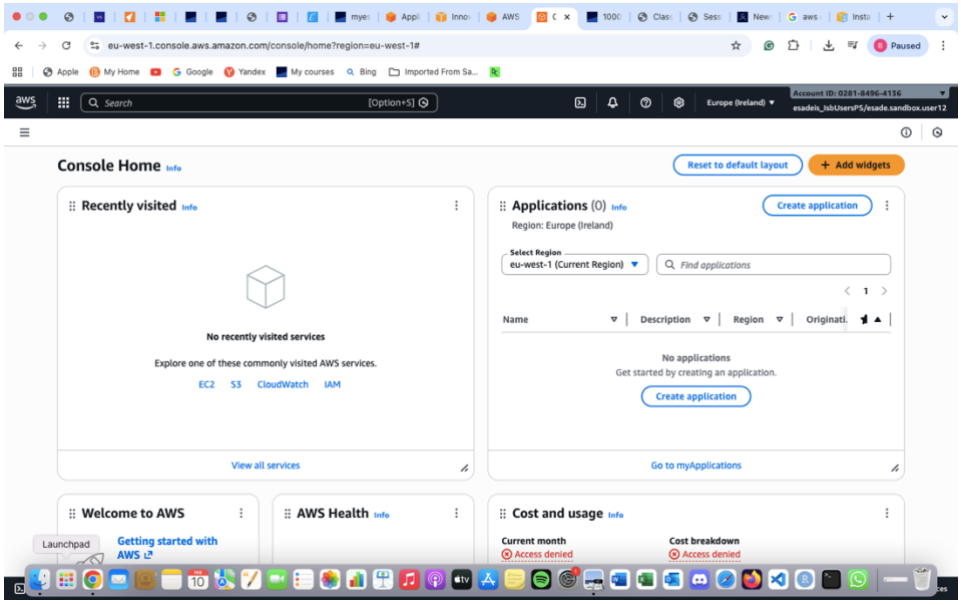

Figure 2: AWS Console

3- AWS CLI Configuration

I followed the installation steps in the AWS help page in order to download the AWS CLI package.

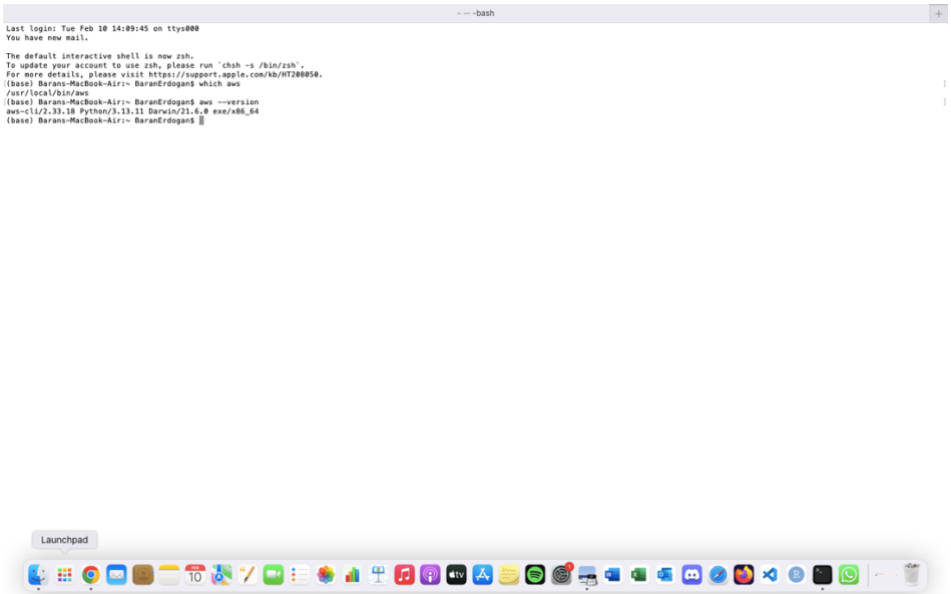

Figure 3: AWS CLI Installation Confirmation

4- AWS CLI Access (Credentials)

From the Sandbox console, I received my AWS credentials and configured my AWS CLI. The configuration process can be seen in the figure below.

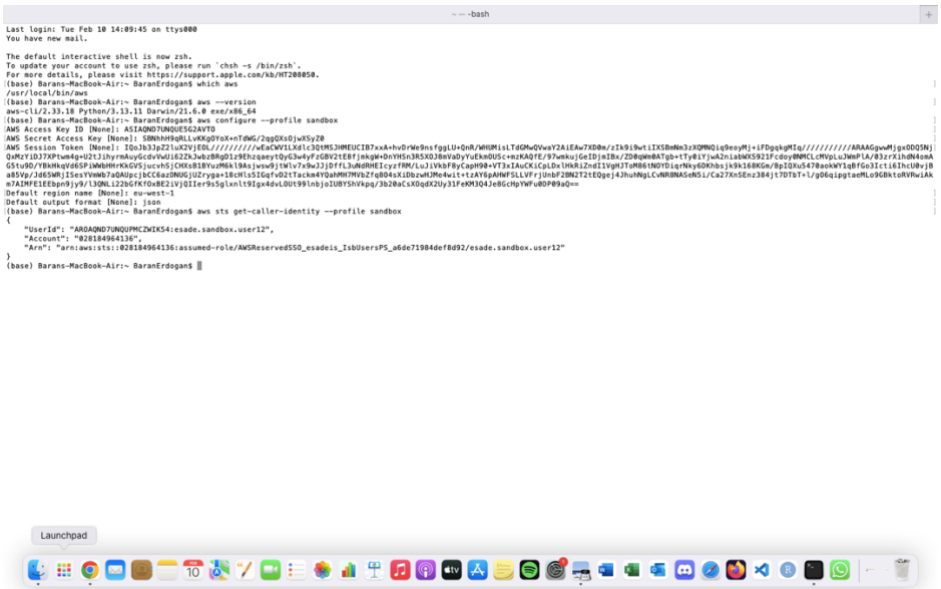

Figure 4: AWS CLI Configuration

5- AWS EC2 Usage

After the configuration process, I created my EC2 instance. I followed the steps in the video guide. Fort he instance, I first created a VPC and Subnet.

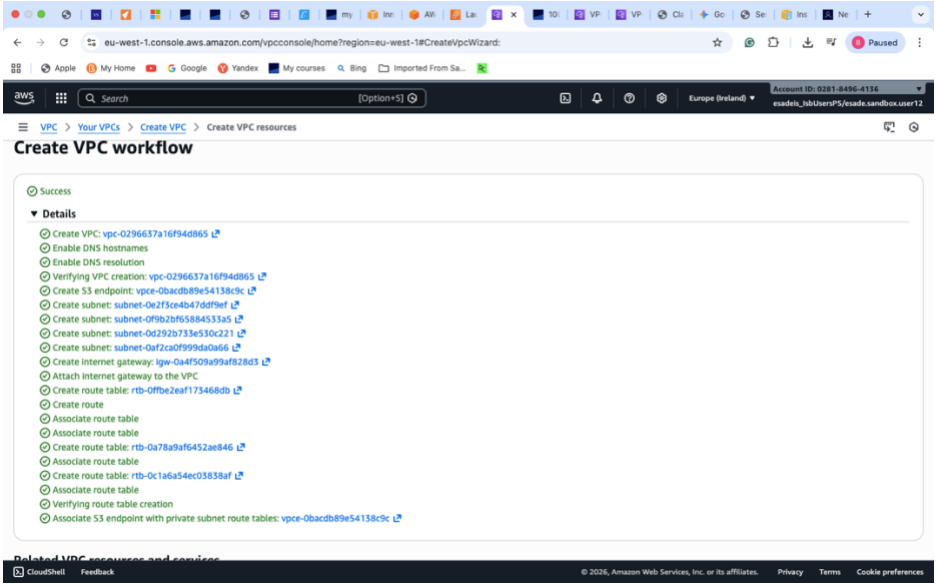

Figure 5: VPC Creation

Then, I launched my instance. I created a new key pair and added the neccesary security groups. The process can be seen in the figures below.

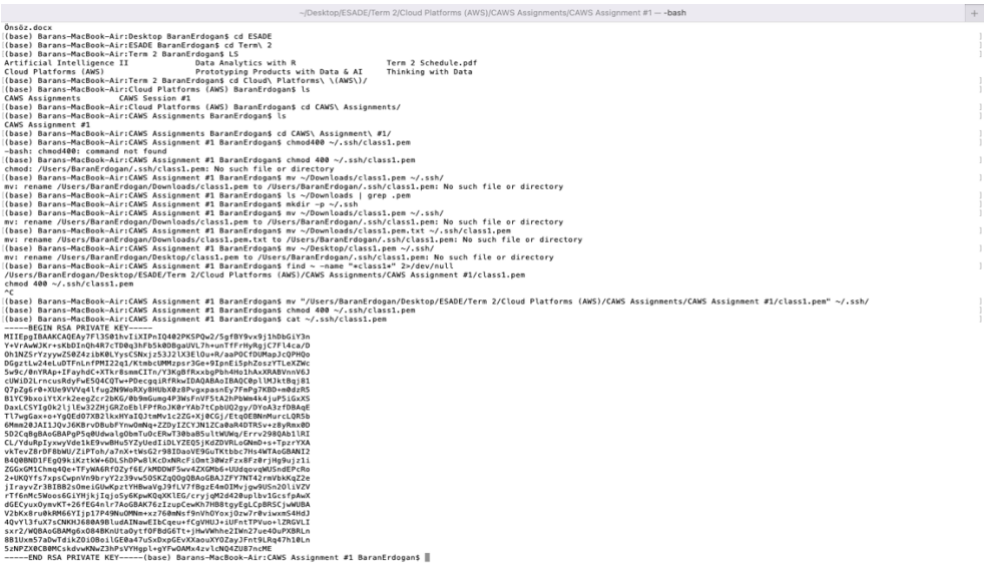

Figure 6: Key Pair Confirmation

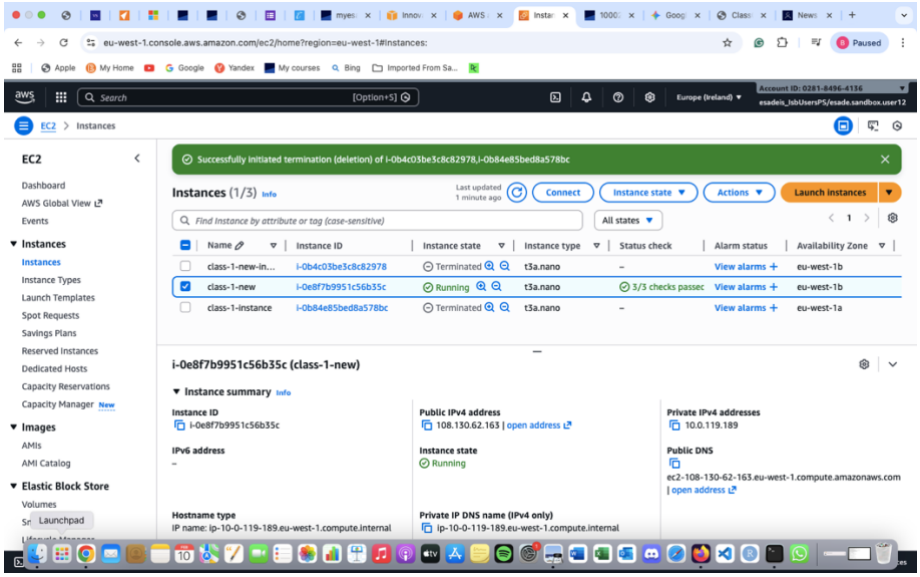

Figure 7: EC2 Instance Launch

6- SSH Access to EC2

I fixed the permissions and made the necessary adjustments to connect to the instance via SSH.

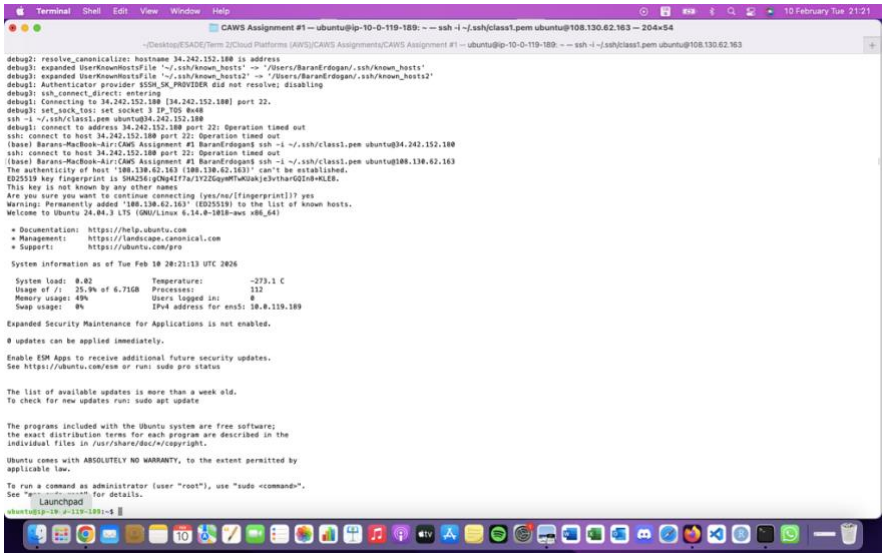

Figure 8: SSH into the EC2 Instance

Furthermore, I deployed my first Cloud server.

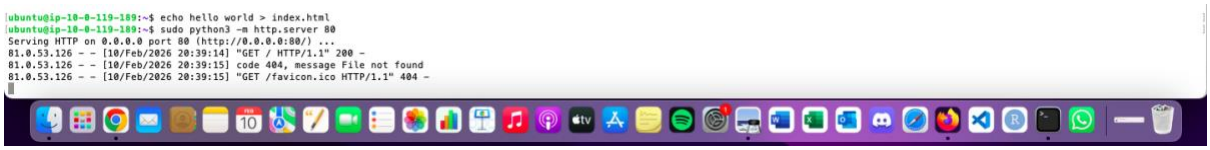

Figure 9: Launcing the Cloud Server

The website is included in the figure below.

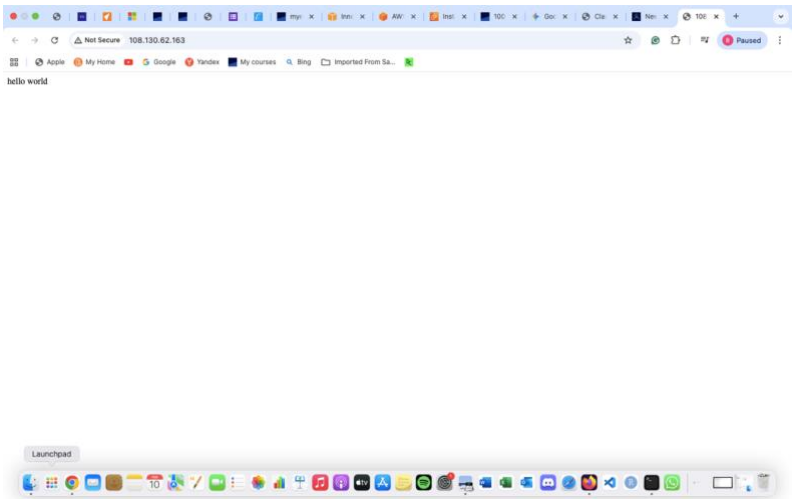

Figure 10: Public Access to the Public Instance IP Address

7- AWS S3 – Upload Object

In the final step, a new S3 bucket was created and session #1 slides was added.
